

Gradients

In this chapter, you will discover how to:

- Add a gradient to a section or a title.
- Add a custom gradient to the Website Builder palette.

Standard

In standard, several gradients can be selected directly from the Website Builder. However, for custom themes, gradients have to be added directly in the `section` tag with a `style` attribute.

Use

```
<section
  class="s_text_image"
  data-snippet="s_text_image"
  data-name="Text - Image"
  style="background-image: linear-gradient(135deg, rgb(255, 204, 51) 0%, rgb(226, 115, 255) 100%);"
  <!-- Content -->
</section>
```

To apply a gradient to text, use a `font` tag with the `text-gradient` class.

```
<h2>
  <font
    class="text-gradient"
    style="background-image: linear-gradient(135deg, rgb(203, 94, 238) 0%, rgb(75, 192, 192) 100%);"
  >
    A Section Subtitle
  </font>
</h2>
```

Custom

```
import { ColorPickerGradientTab } from "@html_editor/main/f
import { registry } from "@web/core/registry";
import { _t } from "@web/core/l10n/translation";

export class AirproofColorPickerGradientTab extends ColorPic
  setup() {
    super.setup();
    this.DEFAULT_GRADIENT_COLORS = [
      ...this.DEFAULT_GRADIENT_COLORS,
      "linear-gradient(0deg, rgb(41, 128, 187) 0%, rgb(1
    ];
  }
}

const colorPickerTabs = registry.category("color_picker_tabs

colorPickerTabs.remove("html_editor.gradient");
colorPickerTabs.add(
  "html_editor.gradient",
  {
    id: "gradient",
    name: _t("Gradient"),
    component: AirproofColorPickerGradientTab,
  },
  { sequence: 60 }
);
```

Note

Add the JavaScript file to the `website.website_builder_assets` bundle so the editor loads it.
