

Taxes

Original definition from `account`

```
model odoo.addons.account.models.account_tax.AccountTax (env: Environment,  
ids: tuple[IdType, ...], prefetch_ids: Reversible[IdType]) [source]
```

```
_name = account.tax
```

```
name : str
```

Required:

Name:

Tax Name

```
type_tax_use : str
```

Required:

Name:

Tax Type

Selection:

sale : Sales purchase : Purchases none : None

Default:

sale

Determines where the tax is selectable. Note: 'None' means a tax can't be used by itself, however it can still be used in a group. 'adjustment' is used to perform tax adjustment.

```
tax_scope : str
```

Name:

Tax Scope

Selection:

service : Services consu : Goods

```
amount_type : str
```

Required:

Name:

Tax Computation

Selection:

- **Group of Taxes: The tax is a set of sub taxes.**
 - Fixed: The tax amount stays the same whatever the price.
 - **Percentage: The tax amount is a % of the price:**
e.g $100 * (1 + 10\%) = 110$ (not price included) e.g $110 / (1 + 10\%) = 100$ (price included)
 - **Percentage Tax Included: The tax amount is a division of the price:**
e.g $180 / (1 - 10\%) = 200$ (not price included) e.g $200 * (1 - 10\%) = 180$ (price included)

active : [bool](#) 

Name:

Active

Default:

True

Set active to false to hide the tax without removing it.

children_tax_ids : [Sequence\[odoo.orm.commands.Command\]](#)
